## BUTTERNUT SQUASH

Type	A hybrid Waltham-type butternut squash.
Maturity	85 – 95 days from sowing.
Plant Characteristics	A vining –type growth habit. Vigorous growth gives good leaf cover of fruit and plants remain active for longer.
Fruit Characteristics	Average fruit size of 1.2 to 1.8 Kg. Typical Waltham shape. Very good uniformity of both size and shape. Flesh is a deep orange when fully mature. Small seed cavity.
Diseases Resistance	Intermediate resistance to ZYMV.
Features and Benefits	ARELA produces a large proportion of medium-sized fruit. Uniformity of both size and shape is very good. The consistent shape is important in producing an attractive end-product. The plants are very vigorous and remain green and active after most others are in decline. Resistance to ZYMV reduces risk to growers.

\* Submitted for registration on the national variety list.
