# \*RIJANA CUCUMBER

Type	Long greenhouse english type.
Plant Characteristics	RIJANA is extremely vigorous with a thick stem. High P levels and controlled irrigation early in the plant life, aid in encouraging healthy strong root formation. It is recommended that the head of the plant is not pruned until the laterals have a length of 20 - 30 cm.
Fruit Characteristics	Fruits are long, dark green and ribbed of high quality (33 - 38 cm). The longer the fruits the greater the risk of pointed fruits. To prevent that, it is important to maintain good water and fertiliser levels, particularly when harvesting in the upper section of the main stem.
Diseases Resistance	High Resistance: PM (Powdery Mildew); CVYV (Cucumber Vein Yellowing Virus) Intermediate Resistance: CYSDV (Cucumber Yellow Stunt Disorder Virus).
Adaptation	RIJANA is suited to spring and autumn plantings.
Yield Potential	Very high yield potential
Plant Spacing	20,000 to 22,000 plants per ha.
Features and Benefits	Vigorous plant with thick stem. Exceptional fruit quality and high yield.

\* Submitted for registration on the national variety list.
