STAR 3315

CABBAGE

Type	A large headed F1 hybrid cabbage variety for the fresh market. Shows good adaptability for summer and winter production.
Maturity	Medium to late maturing. Approximately 85 - 95 days from transplant to maturity in summer, i.e. 5-10 days later than STAR 3301. Maturity will vary by as much as 10-20 days between mid summer to mid winter plantings. Maturity is very uniform with a high first cut percentage.
Plant Characteristics	A large plant with an upright leaf habit that provides excellent head protection. A plant population of 28 000 plants per ha is recommended for single head marketing, and 35 - 45 000 plants per ha for bags. Plant population will influence head size. For larger head size the plant population should be reduced to suit your needs.
Head Characteristics	STAR 3315 has very firm round to semi-globe shaped heads with an average head size of between 3 - 5 kg with an excellent flavour. The colour of STAR 3315 is a typical blue-green which is highly sought after by market agents and hawkers. STAR 3315 has a high first cut percentage and good standability. In order to prevent a low first cut care should be taken to ensure that seedling transplant shock is minimized.
Features and Benefits	A vigorous grower with large high yielding heads.
Fertilization Guidelines	This is a general guide, grower conditions vary and a soil analysis is highly recommended: N - 150 to 200kg/ha. 70 to 90 kg/ha incorporated preplant. Top dress the balance as follows: Summer: 7,14 and 28 days after transplanting (no later). Winter: 14,28 and 45 days from transplant (no later). P - 50 kg/ha incorporated preplant. K - 120 kg/ha incorporate preplant. Soil pH - 6 - 6,8.
