# STAR 3317

## CABBAGE

Type	A medium to large hybrid cabbage variety for the fresh market.
Maturity	Early to medium maturing. Approximately 80 - 90 days from transplant to maturity in summer. Maturity is very uniform with a high first cut percentage.
Plant Characteristics	A medium to large frame that has an upright leaf habit. A plant population of 28 000 plants per ha is recommended for single head marketing, and 35-40 000 plant per ha for bags. Plant population will influence head size. For larger head size plant population should be reduced to suit your needs.
Head Characteristics	STAR 3317 has semi globe shaped heads weighing between 2-3.5kg with very good internal quality.
Disease Resistance	Good black rot resistance under field observation.
Features and Benefits	STAR 3317 offers the grower the opportunity to achieve high marketability under Black Rot pressure. STAR 3317 has good holdability and uniformity which allows for very uniform cut.
Fertilization Guidelines	This is a general guide, grower conditions vary and a soil analysis is highly recommended. N - 150 to 200kg/ha. 70 to 90 kg/ha incorporated preplant. Top dress the balance as follows: Summer: 7,14 and 28 days after transplanting (no later). Winter: 14,28 and 45 days from transplant (no later). P - 50 kg/ha incorporated preplant. K - 120 kg/ha incorporate preplant. Soil pH - 6 - 6,8.
