STAR 8001

GEM SQUASH

Type	A gem squash hybrid.
Maturity	Some 10 – 14 days quicker than open-pollinated standards. 50 -60 days fo baby fruit, 70 – 80 days for mature fruit.
Plant Characteristics	A vigourous and productive plant with short internodes. Shorter vines allow higher plant densities and easier management in early crop stages.
Fruit Characteristics	Round, dark green fruit with a small blossom end scar. Fruit are round from a very small size making STAR 8001 a very good choice for baby gem squash production.
Yield Potential	High with the potential to set fruit at each node. Early maturity and suitability of small fruit for the baby market offer flexibility in marketing strategy.
